

Supplementary Table 1. Incidence (%) of postoperative bleed within 24h, by aspirin use, timing of VTE chemoprophylaxis, and sex

Population	Overall	Preoperative initiation	Initiation within 12h postoperative	Initiation >12h postoperative	p value
Aspirin users					
Overall (n=206)	13.59%	11.94%	9.38%	15.89%	0.57
Females (n=135)	17.78%	17.95%	9.52%	20.00%	0.54
Males (n=71)	5.63%	3.57%	9.09%	6.25%	0.78
No aspirin use					
Overall (n=658)	7.29%	10.31%	3.39%	6.94%	0.07
Females (n=366)	7.38%	8.85%	2.99%	8.06%	0.30
Males (n=292)	7.19%	12.35%	3.92%	5.63%	0.10
